

# Use case

## One space. Smart controls. Maximum value.

### AIRPORT CHALLENGE

DAR – 2025

- Airports traditionally separate domestic and international departing passengers into distinct boarding lounges.
- This results in duplicated infrastructure, underutilized gates, higher operating costs and a constrained passenger and retail experience, particularly for international travelers facing time uncertainty before passport control.

### SOLUTION

- **Clear2Fly™** redefines post-security boarding through:
- **Unified Hybrid Lounge:** A single shared area merging domestic and international passenger flows.
- **On-Demand Immigration:** Decentralized, time-slot-based passport control to eliminate peaks and wait times.
- **Smart Gates & Secure Data:** Real-time bi-directional validation (identity, flight, clearance) while ensuring full authority data sovereignty.

### RESULT

- Seamless and stress-free passenger experience
- Increased dwell time and commercial exposure
- Optimized gate usage and reduced infrastructure duplication
- Greater operational flexibility and cost efficiency
- A solution fully adaptable to local regulations and international aviation standards
