

Use case

How to enhance security and elevate the passenger experience without costly expansions ?

AUH

AIRPORT CHALLENGE

Forging the future of air travel using facial recognition for swift and secure passenger authentication.

SOLUTION

Thanks to the Signal Token Journey (STJ) solution the travel journey is seamless. This integrates biometric technology across key touchpoints – automated check-in, self-service baggage, and e-gates – enabling document-free, secure travel.

RESULT

Processing times have dropped from 25 seconds to just 7 seconds, boosting efficiency and reducing resource dependency. By 2025, the goal is to implement this solution across all airlines, setting a new standard in smart, secure travel.
