

AIRPORT CHALLENGE

Limited shared situational awareness and reactive, late decision-making.

SOLUTION

The Thales APOC provides a centralized, event-driven operational platform that transforms fragmented data into shared awareness and coordinated action across the airport ecosystem.

- Shared Operational Picture: Provides all stakeholders with a single, real-time view to align planning and execution via the AOP.
- Event & Impact Management: Detects operational events with clear ownership while assessing disruption impacts for predictive decision-making.
- Collaborative APOC Decisions: Enables structured and synchronized decision-making across the entire airport command center.

RESULT

- Faster, better-coordinated operational decisions across all stakeholders
- Increased operational efficiency and optimized use of airport resources
- Reduced impact of disruptions on passengers and ground operations
- Enhanced predictability and reliability of daily airport operations
- Stronger compliance with A-CDM, TAM, and Extended AOP requirements.
